

MOHAMED ISLEM BEN JABALLAH

Software Engineer with 7 years of experience.
Proven track record of developing innovative solutions.
Building successful projects and putting a smile on clients and colleagues faces.

EDUCATION

Engineering Master's Degree
National Institute of Applied
Science and Technology

2016- 2022 Tunis,Tunisia

Major: Software Engineering
Minor: DevOps

SKILLS

Software :

Unity OpenCode

Programming Languages:

C# C++ HLSL

SQL TypeScript

Technologies:

XR Agentic AI Git CI/CD

Web API

LANGUAGES

- Arabic : Native Language
- English : Bilingual Proficiency
- French : Bilingual Proficiency

EXTRA-CURRICULAR

- Head of AudioVisual
Tunisian National Robotics Day
- Active Member and Head of
AudioVisual CinéRadio INSAT
- INTERFERENCE Voluntary
Installed Hans Kotter's suspended
electrical artwork, featured on L'instantM
- INTERPOL Capacity Building &
Training Speaker (2025)

ACADEMIC PROJECTS

Indoor camera position prediction
AI to manage BIM building in AR

- Detecting humanly traversable paths
in a generated 3D building Model
with a 81% accuracy.
- Capturing an image database from a
runtime generated 3D model.

PROFESSIONAL EXPERIENCE

Project Manager / Technical Lead

Multi-platform immersive ecosystem (VR, Web, Dashboard, API)

Aug 2024 – Present Millennium Technologies – Abu Dhabi, UAE

- Leading delivery of a scalable platform (Unity, Web, backend APIs).
- Architecting a multi-application system enabling real-time education leveraging VR.
- Managing and mentoring a cross-functional team of 30+ engineers, artists, and designers.
- Driving technical decisions, scope definition, and delivery timelines with focus on performance and scalability.
- Hands-on development of core systems and critical features across the stack.

Project Manager

Large-scale immersive room C.A.V.E & XR hub

Mar 2023 – Mar 2024 Park of Economic Activities – Zarzis, Tunisia

- Led technical design and delivery of one of Africa's first C.A.V.E Installations.
- Defined technical specifications for international tender compliance.
- Bridged technical and commercial teams to align solution design with business goals.
- Developed interactive VR applications to showcase the XR facility.

Game Developer

Adaptive multiplayer VR experience (biofeedback-driven)

Feb 2022 – Aug 2022 ICONIK SA – Marseille, France

- Designed and implemented AI systems for dynamic enemy behavior and player combat.
- Integrated real-time biofeedback - blood pressure/Oxygenation sensor - to adapt gameplay mechanics.
- Optimized Git workflows, improving team collaboration efficiency.

.NET Backend Developer

Connected automotive web platform

Jan 2021 – Jan 2022 Rooly – Tunis, Tunisia

- Designed and developed scalable .NET WebAPI services.
- Defined product roadmap and platform architecture.
- Implemented CAN bus data decoding pipelines for real-time vehicle data processing.

3D Developer - BIM

Digital twin platform for BIM management

May 2020 – Mar 2021 DATA PM – Tunis, Tunisia

- Developed a real-time 3D generation pipeline that consumes API calls and JSON stream responses to construct and apply 3D assets and materials dynamically in Unity.
- Reduced load times by 70% through asynchronous Csharp libraries.
- Developed optimized HLSL shaders, improving rendering performance by 12%.
- Delivered responsive UI systems for a smooth and intuitive 3D navigation.

VR Simulation Developer

Immersive Fitness Simulation

May 2019 – Mar 2020 Blackdune Studio – Tunis, Tunisia

- Developed procedural environment generation for an endless runner.
- Simulated real-world bicycle physics into gameplay mechanics.
- Prototyped embedded bike hardware for motion tracking (speed and lean detection).
